Family history of a first degree relative with breast or ovarian cancer was reported by 17% of patients. Between 1st June 2000 and 31st May 2008 a total of 6406 patients were diagnosed with breast cancer within the Auckland region. Of these, 91% consented to their details being included in the register (excluding 164 who died before consenting). The data for these 5698 patients, representing 5811 incidents of breast cancer, are presented below.

### Treatment

**Demographics** (by patient, n=5698)

- Age Distribution
- Ethnicity Compared with Census 2006

**Diagnosis**

- Presentation/Detection Method by Year
- Presentation/Detection Method by Age
- Presentation/Detection Method by Ethnicity

**Treatment**

- Surgery
- Primary Surgical Procedure by Invasive or In Situ
- Primary Surgical Procedure by Age - Invasive
- Primary Surgical Procedure by Ethnicity - Invasive

**Oncology**

- Radiotherapy Treatment
- Systemic Therapy (invasive only, n=4652)

### Prognostic Indicators

- **(invasive only, n=4965)**

- Tumour Stage
- Tumour Size by Tumour Grade
- Tumour Size by Age
- Tumour Grade by Age
- Tumour Grade by Ethnicity

**Data for Male Breast Cancer** (n=33)

- Tumour Grade
- Tumour Size
- Hormone Receptor Status
- Her2 Status
- Nodal Status by Ethnicity

Data to date for demographics, diagnosis, prognostic indicators and treatment are mostly consistent with national and international reports. The Auckland Breast Cancer Study Group gratefully acknowledges the support of their primary sponsor:
